Certifydoc for Computer Forensic Experts

What competitive advantages does Certifydoc offer to computer forensic experts?

Earn time, money and the **trust of your clients** by offering a digital evidence certification service that gives reputation and security over the years.

If you carry out **computer expert reports,** counter-expert reports or meta-expert reports, save time and money in file certifications and facilitate explanations in court. If you carry out forensic analysis or audits, try to have a tool that allows you to spend your time on the main task and that makes the process easier.

With this innovative **#legaltech solution** everything is simplified, the ease of use of our technology, the use of qualified service providers and the long-term validity of the certifications granted by them, provide two fundamental instruments in a single tool (qualified time stamping and strong encryption) to carry out the expert appraisals efficiently.

The delivery of the certification in email format is intended to be explained to the court and clearly understood, either as documentary evidence, or at the time of the hearing. A comfortable PDF to print can be presented as a reference to the digital evidence. The verification and validity of the certification can be carried out at any time also during the viewing, with independent third-party tools (XolidoSign, for example).

The email received as a result of the certification is **self-consistent**, which means that from that moment the user will not depend on any intermediary to keep and use their digital proof. Simply by saving the email on the hard drive in '.eml' format, everything necessary to verify its legal value can be safely and easily archived.

Certifydoc

What competitive advantages does Certifydoc offer to computer forensic experts?

To preserve the **chain of custody**, Certifydoc allows a qualified time stamp to be given to the hash (fingerprint) of any image or hard disk, since the investigations are carried out on the copies made and the originals must remain unaltered and secured.

To certify with Certifydoc **is so simple** that it can be done at any time just by registering, without subscriptions or permanence, with any smartphone or PC device.

Only what is consumed at the moment is paid online. The cost of a certification is €2 + VAT.

The service allows you to gather, in a single shipment, any document (computer expert report, technical documentation, emails, whatsapp messages, etc.) without limitation of type or number of files, up to a total of 17 MB per certification. In this way the certified evidence can be received, shared and archived easily and securely.

In the case of certifying files with no size limit or entire hard drives, Certifydoc offers a specific guided process for experts that certifies the 'hash' produced in a few seconds.

With regard to privacy, Certifydoc has implemented a **restrictive interpretation** of the current local EU states and GDPR regulations in various aspects: each file preparation process takes place rigorously on the user's device; files can be strongly encrypted (with AES256 algorithm) before sending them with secure protocol (SSL); Finally, Certifydoc instantly deletes all the files sent from its servers once the certification email has been sent to the user. These aspects are highly relevant in court cases and in cases of handling highly sensitive data.

In this short video we show you how Certifydoc can help IT judicial experts:

Computer forensic Testimonial

> "Certify the integrity and date certain in forensic reports of domestic violence"
>
> As a computer expert in court cases, I need to meet important requirements: ensure that digital evidence preserves the chain of custody; demonstrate compliance to technical and procedural practice; present and explain in an easy and clear way the result of the expert reports before the justice system, and be able to independently verify the validity of the certifications at any time.
>
> Certifydoc allows me to meet all these requirements easily, quickly and economically.
>

Certifydoc

Legal

According to current law, photos, videos and electronic documents have very low legal relevance because their content and date can be easily manipulated. So how can I protect myself to prove the status of a property at a given time?

Without Certifydoc the documentary evidence is uncertain.
- Do my documents have sufficient probative value?
- Can they be challenged?
- Have they been manipulated?
- Can I prove that they have been created on a specific date?

With Certifydoc the answer to these questions will always be favorable to your interests, which will be very useful when negotiating with buyers, authorities, clients, tenants, owners, experts, lawyers, both in the previous negotiations and before or after a lawsuit. Having evidence with the maximum legal value (probative value) can avoid lawsuits and long conflicts that nobody wants to suffer. Certifydoc acts as an intermediary, the certifications are granted by the certification authorities of Spain and other members of the European Union, through qualified time stamping.
